

Microgard™ C/UC/UCP Photochemical Filters

Clean, high-throughput filtration for bulk photochemical manufacturing and solvent applications

Microgard™ C/UC/UCP photochemical filters deliver best-in-class, contamination control performance in bulk photochemical manufacturing and solvent-based photolithography applications. In addition to advanced retention capabilities, Microgard C/UC/UCP filters include a choice of cleaning technologies to meet critical process demands at sub-28 nm technology nodes.

- Standard Clean (C): Clean, low metal UPE membrane and filter design
- Ultraclean (UC): Superior device cleaning method and enhanced cleanliness specifications
- Ultraclean Plus (UCP): Most advanced cleaning method for ≤ 1 nm rated UPE membranes

These cleaning technologies are designed to further reduce particle shedding, metal and organic extractables. A higher throughput (HT) device design is also available in select 10", 20", and 30" filter types for enhanced flow rate performance. See Specifications and Ordering Information for more details.

APPLICATIONS

- Bulk solvent chemical filtration
- Chemical distribution systems
- Bulk photochemical filtration

FEATURES & BENEFITS

Contamination control technologies for clean and ultraclean performance	Meets most process requirements at 28 nm or below Reduces particle shedding, metal and organic extractables in sub-28 nm nodes
Advanced device design	Higher chemical throughput and flow rate performance
Broad chemical compatibility	Photoresist, solvents and other ancillary chemicals
